

4Nature System

**HEALTHY
SUSTAINABLE
WORKPLACE**

4Nature System is a prop-tech company that has been developing the idea of biophilic design in offices for many years. Our mission is to bring nature closer to a human and improve air quality with live plants supported by advanced IoT technology.

We strongly believe that by combining these elements, we effectively take care of well-being of people. The green environment in the workplace has a positive effect on our health, productivity and satisfaction with life.

Creating safe and healthy interiors in line with the idea of biophilic design requires an innovative approach. The IoT platform with a mobile app is an array of sensors monitoring the office environment and plants condition, providing adaptive, autonomous control. Together with verticality, it introduces more live greenery into offices with minimal maintenance costs. Our solutions are modular and compatible, thus providing unlimited arrangement possibilities. We provide architects and designers with tools to create healthy and sustainable work spaces.

We spend 90% of our time indoors, so their arrangement is crucial for our physical and mental health.

Vegetation changes the space perception by people. Interiors with plants are considered much more attractive than those that are devoid of them.

4Nature System solutions increase air humidity, improve air quality and increase work comfort. They have a positive effect on well-being, reduce stress, increase creativity and efficiency.

However, the right amount of plants is very important because only then we can obtain a noticeable improvement in the microclimate and well-being of employees.

In the 4Nature System, we have checked the exact impact of our vertical plant systems on office workers. The research was carried out on our behalf by the Polish Green Building Council together with the Silesian University of Technology.

62%

of people noticed an increase in work efficiency and cognitive performance

84%

of employees felt an improvement in their well-being and reduction in stress

80%

of employees felt an improvement in air quality and humidity

88%

of people want to have plants as close to the workplace as possible – up to 2m.

86%

of people confirmed an improvement in work comfort
